

MAGNUM FLOW

AIR FILTER

2014 CHEVROLET CORVETTE
V8-6.2L

FEATURES & BENEFITS

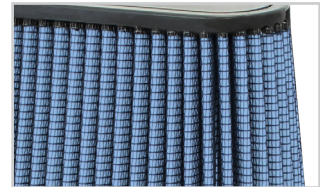

Full Urethane Framed Construction

aFe Power performance air filters are constructed using full 360 degree urethane frames. This construction is very rigid and allows for a proper OE style fit with excellent filter strength.

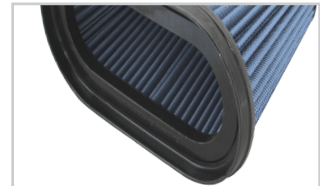

Rounded Pleats

aFe performance air filters use a rounded pleat design, which produces more useable filter surface area for increased flow and greater dust holding capacity.

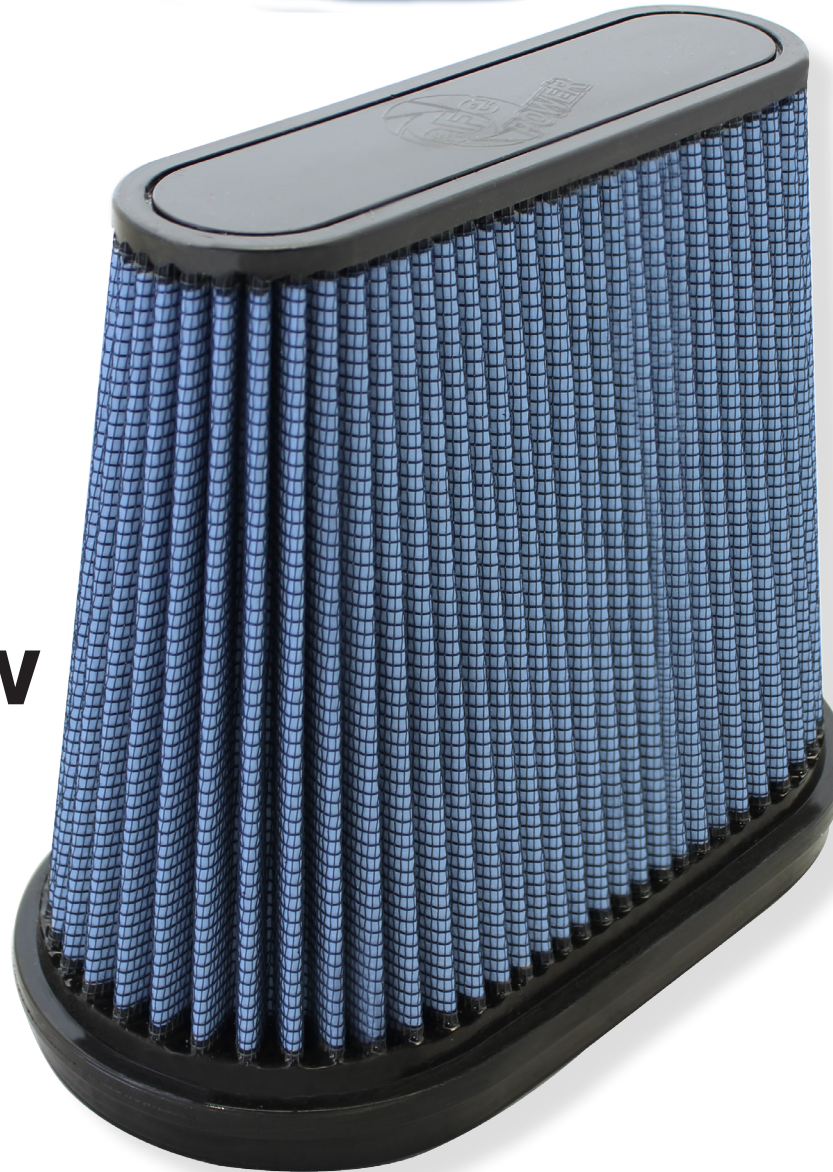

Bump Seal

The pliable urethane bump seal conforms to even the most uneven housing. This design eliminates the use of gaskets or sealants and makes for a perfect filter fit and sealing surface every time.
